Absolute Product Admin Courses

Become Fully Certified in Secure Endpoint or Secure Access and Maximize the Potential of Your Deployments.

Absolute Secure Access Administrator and Secure Endpoint Administrator courses ensure your invest in Absolute's product is maximized. These courses are designed to empower your IT staff to effectively and efficiently implement and administer your product deployments.

Our courses are offered as live, instructor led interactive sessions or on-demand self-paced should your availability not align to our live course schedule. All that is needed is a modern web browser and a phone or speakers to participate. Both courses conclude with a formal examination which upon receiving a passing score grants the student a product certification certificate.

Unleash Your Network's Full Potential with Absolute Secure Access Training

Are you ready to revolutionize your network security and efficiency? Say goodbye to months of trial and error and welcome aboard our Absolute Secure Access training course. In just two power-packed days, we'll arm you with the knowledge and skills needed to master our Secure Access product inside out, saving you time, boosting productivity, and fortifying your digital fortress.

Shortcut to Mastery: Unlock Months of Learning in One Course

Our intensive two-day training will fast-track your journey to becoming a Secure Access expert. By condensing months of learning into a concentrated program, we ensure you're equipped with the essential skills from day one.

Can You Afford Not to Take It?

When considering the investment in training, ask yourself: can you afford not to? The loss in productivity from operating without full product knowledge far outweighs the cost of our training course. Don't let uncertainty hold you back – invest in your team's expertise and watch your efficiency soar.

Maximize Your Value with Secure Accesses Latest Capabilities

Our latest release brings new features like Secure Web Gateway and role-based access control for Insights for Network. Secure Web Gateway (SWG) is a cloud-based service used to protect client web browsers from web-based threats. At the basic level it scans for viruses and malware and blocks infected sites. When you enable greater levels of security, it isolates web traffic — the SWG server opens a session with a website and performs security functions on its own remote server before sending the traffic to a client browser. If you are planning to move to version 13, now is a perfect time to take advantage of the training. Even if you aren't moving to version 13 right now, the concepts covered in this course will also apply to earlier versions.

Each student will have their own individual virtual "sandbox" to install and configure a fully working environment with clients, application servers etc. In each class, we also have time for discussion — an open forum where students can get help with anything related to your Secure Access environment.

Your Instructor

Seth Lampman is the instructor for all Secure Access Admin classes. He has 18 years of experience with Absolute Secure Access (formerly NetMotion Mobility), both as a customer and as an employee. In his previous position (as a customer), he designed, managed, and supported a 10,000 seat Secure Access deployment. He designed this certification course from the ground up including all material, labs, and exercises.

What You'll Learn

Secure Access Product Overview & Architecture

- ✓ Embrace the future with Zero Trust Network Access and Software Defined Perimeter.
- ✓ Monitor your network's health and performance with Digital Experience Monitoring.
- ✓ Uncover the core functionality, security, and productivity benefits that await.

Secure Access Installation & Configuration

- ✓ Dive deep into full server installation and configuration in our state-of-the-art lab environment.
- ✓ Master server and client settings, user groups, authentication profiles, and more.
- ✓ Ensure seamless connectivity and application session persistence through comprehensive testing.

Policy Management & Exercises

- ✓ Craft purpose-driven policies with ease, from rule structure to working with host groups.
- ✓ Tackle real-world scenarios with hands-on exercises, from Software Defined Perimeter to Secure Web Gateway.

Insights for Network Optimization

- ✓ Harness the power of network insights to boost performance, defend against threats, and control costs.
- ✓ Interpret diagnostics reports like a pro and troubleshoot with confidence using management tools.

Thanks again for a great class. That had to be one of the best virtual classes I've taken. There was a lot of great information and it wasn't boring at all, excellent job. Your passion for and knowledge of the product shows. I have to admit I was hesitant about taking a virtual course because I had a really bad experience in the past. This class was COMPLETELY different from my last experience!

**IS SYSTEMS ADMINISTRATOR,
LARGE COUNTY, NORTH CENTRAL US**

I do have to say with great enthusiasm, 'THANK YOU!' for providing virtual machines in the lab with sufficient resources! It made the labs that much more effective and interesting. I also found the information in the course HIGHLY valuable. It will enable me to go back to my own environment and put all of these concepts to practical use.

Secure Endpoint Administration Course

Are you ready to take your endpoint security to the next level? Look no further than our comprehensive Secure Endpoint training course. In just two days, we'll equip you with the knowledge and skills needed to harness the full potential of our Secure Endpoint solution, empowering you to safeguard your organization's digital assets with absolute confidence.

The Absolute Secure Endpoint Administration Training course covers a broad range of concepts towards Administrating and Installing Absolute Secure Endpoint Agents. The training will include familiarization with the Absolute Secure Endpoint Console, Agent Installation, Reporting and Endpoint Device Actions.

This is a live instruction led course and each student will have access to an Absolute Secure Endpoint Console and a Virtual machine to install the Absolute Endpoint Agent. All that is required for the course is Internet browser and a phone or speakers, students are encouraged to bring their own laptop device if they have any unique installation requirement.

Your Instructor

Amin Juma is the lead instructor for the Absolute Secure Endpoint Admin courses. As a Technical Instructor at Absolute Software, he is deeply enthusiastic about our cutting-edge security products. With a diverse background as a Network Administrator, Sales Engineer, and IT Support Specialist, he brings a wealth of experience to the classroom. My mission? To demystify and empower aspiring students with a thorough understanding of Absolute Secure Endpoint Software. Having dedicated over 25 years to the software industry, I thrive on sharing knowledge and fostering innovation.

What You'll Learn

Product Overview & Architecture
- ✓ Dive deep into the architecture of our Secure Endpoint solution, from SaaS overview to client communication and security.
- ✓ Explore client identifiers and learn how they enhance the security of your endpoints.

Absolute Console Foundations
- ✓ Master the Absolute Console with ease, from dashboard navigation to reporting fundamentals.
- ✓ Discover the power of rules, policies, and user management, and unlock the full potential of authentication settings like MFA and SSO.

Device & Console Actions
- ✓ Take control of your devices with confidence, whether it's freezing, unfreezing, wiping, or remotely scripting actions.
- ✓ Empower end users with targeted messaging and streamline operations with bulk operations.
- ✓ Asset Lifecycle Management
- ✓ Learn best practices for device grouping, unenrollment, and cleanup, ensuring a streamlined asset lifecycle management process.
- ✓ Never lose track of your devices again with advanced techniques for handling missing devices.

Endpoint Analysis & Reporting
- ✓ Dive deep into endpoint analysis and reporting, from complex filtering to scheduling and sharing reports.
- ✓ Customize your device fields and collectors to gain deeper insights into your endpoint landscape.

Application Management & Resilience
- ✓ Gain full visibility into installed applications and their health status, ensuring your endpoints are resilient against threats.
- ✓ Explore application resilience strategies to keep your endpoints secure in the face of evolving threats.

Security Posture Monitoring & Reporting
- ✓ Monitor your security posture with precision, from encryption and antimalware reporting to endpoint data discovery and compliance enforcement.
- ✓ Ensure end user compliance with robust enforcement measures integrated into our Secure Endpoint solution.

System Integrations
- ✓ Seamlessly integrate Secure Endpoint with your existing systems, including SIEM and ServiceNow, to streamline workflows and enhance security.

Lost & Stolen Devices
- ✓ Utilize geolocation and dark device detection to swiftly locate lost or stolen devices and launch investigations with confidence.

Utilities
- ✓ Manage your licenses with ease and leverage powerful network diagnostics tools to ensure optimal performance.
- ✓ Stay informed with our persistence status monitor, ensuring your endpoints remain protected at all times.
